

Ararira Springs Primary School

CityMax scores top marks for both form and function

Advanced Lighting Technologies products were selected to provide a lighting solution for the carpark and pathways at Ararira Springs Primary School. ADLT had the ideal product from Holophane; an international award winning luminaire which met all the project requirements.

Challenges:

The challenge for this school lighting project was in achieving good horizontal and vertical illuminance with a luminaire less imposing than a conventional area light. The project needed a luminaire that was aesthetically pleasing, positioned at a relatively low mounting height with excellent glare control.

Managing pathway lighting in a stylish form can be challenging when bollards couldn't provide the vertical illuminance required for this project and can be prone to vandalism.

Solutions:

The Holophane Citymax meets all those requirements. It offers excellent light control thanks to modern LED lensing and distributions. Allowing a more conventional plaza style, to provide higher performance to suit the areas that need to be lit.

Key Benefits:

- Aesthetically pleasing pole and luminaire package
- Excellent luminaire performance
- Competitive pricing

The CityMax meets the requirements of the above in an efficient and reliable form with excellent light distribution and competitive pricing.

- Ed McDonald, Engineer at Powell Fenwick

Project Title

Ararira Springs Primary School

Client

Powell Fenwick

Project Completion Date

February 2019

Application

Carpark and Pathway

Product

Holophane CityMax x4
PS Pole Series

Product Warranties

Holophane 5 Year Warranty
PS Pole Series 7 Year Warranty
